

OKS 110 - Product Information

Fields of Application:

For sliding properties improvement of machine parts, apparates and precision machinery, especially for microfinished surfaces. For incorporation in plastics, sealings, packages, sintered metals and improvement of sliding properties. For longterm or possibly lifetime-lubrication.

OKS 110 MoS₂ Powder, Microsize

Advantages and Benefits:

Reduces friction and wear in a wide temperature range. High effectiveness due to high affinity of MoS_2 to metals. Low friction at highest load capacities. Low consumption based on forming of extreme thin sliding films. Not electrically conducting and not magnetic. Chemically stable except against haloginated gases, concentrated sulfuric- and nitric acid.

Application:

For best adhesion, clean sliding surfaces. Best way is to clean mechanically first and then with OKS 2610 or OKS 2611 universal cleaner. Apply on small parts in series production by tumbling, under addition of small amounts powder and tumbling parts, until a complete MoS_2 film is formed. Brush the powder onto bigger surfaces. Addition of approx. 2 - 3% for self-lubricating material before forming. For further questions please contact our Technical Department.

Zusatzinformationen:

Liefergebinde (Artikelnummer):

- 1 kg Tin (00110034)
- 5 kg Hobbock (00110050)
- 25 kg Hobbock (00110062)

Version: E-04.1/13

Technical Data

	Norm	Conditions	Unit	Value
Solid Lubricants				
Туре				MoS ₂
Particle size	ISO 13320-1	d 50 max. d 99	μm	2,5 - 5,0 max. 15,0
Entire share		MoS ₂ - content	mass-%	> 98,5
Application Data				
Density			g/cm³	approx. 4,8
Colour				grey-black
Service Temperatures				
Minimum service temperature			°C	-185
Maximum service temperature		in normal atmosphere	°C	450
Maximum service temperature		in vakuum	°C	1100
Maximum service temperature		in inert gas	°C	1300
Miscellaneous				
Electrical Conductivity	DIN 51 412-1			non-conductive
