

Double Coated Polyethylene Foam Tape 9546

Product Data Sheet

Updated : August 2001 Supersedes : New

Product Description

Polyethylene foam coated on both sides with a modified Acrylate pressure sensitive adhesive.

Physical Properties

Not for specification purposes

Adhesive Type	Modified Acrylate	
Foam Core	Closed cell Polyethylene Foam	
Thickness	1.15 mm	
Release Liner	Siliconised white paper	
Density	67 kg/m³	
Tape Colour	White	
Shelf Life	12 months from date of despatch by 3M when stored in the original carton at 21°C (70°F) & 50 % Relative Humidity	

Performance Characteristics

Not for specification purposes

180° Peel Adhesion to stainless steel (FINAT- TM1) One side reinforced with PET Film. 20 min dwell 24 hours dwell	18 N/25mm* 18 N/25mm*	Cohesive Failure
Static Shear on Stainless Steel (FINAT- TM8) One side reinforced with PET Film. At 23°C At 70°C	> 150 hours > 30 minutes	
Temperature Performance	-40°C to +80°C (Short Term 90°C)	

Date: August 2001 Double Coated Polyethylene

Foam Tape 9546

Application Techniques

- 1. Bond strength is dependent upon the amount of adhesive-to-surface contact developed. Firm application pressure develops better adhesive contact & thus improves bond strength.
- 2. To obtain optimum adhesion, the bonding

surfaces must be clean dry and well unified. A typical surface cleaning solvent is isopropyl alcohol. Use proper safety precautions for handling solvents.

3. Ideal tape application temperature range is 21°C to 38°C (70°F to 100°F).

Initial tape application to surfaces at temperatures below 10°C (50°F) is not recommended because the adhesive becomes too firm to adhere readily. However once properly applied low temperature holding is generally satisfactory.
